Disclaimer for the Following Slides

➢All data is directly from the Florida Department of Health (FDOH) and Centers for Disease Control (CDC)

➢No data or statistics are generated by the presenter

➢Some statements related to data is local data known from local cases, based on discussions and advisement from local health department officials

➢Data, unless otherwise stated, is cumulative from March 2020-September 5, 2020

District Health

❖Coordination with schools and departments by the Suwannee County Health Department and school health coordinator has been tremendously successful

❖Confidentiality of the circumstances has been able to be maintained

❖Cases are almost non-existent at this time.

District Health

❖SCSD is not responsible for contact tracing or notification

District Health

❖SCSD is not responsible for contract tracing or notification

❖SCSD does not have data and is not provided data related to COVID-19 from school sites or departments. Any district-wide data is still considered confidential according to the Florida Department of Health

District Health

❖SCSD is not responsible for contract tracing or notification

❖SCSD does not have data and is not provided data related to COVID-19 from school sites or departments

❖There is no direction or permission to gather or share data (directive from DOH)

District Health

❖ There has been:

One (1) student tested positive in the past three school days across the District

Zero (0) faculty/staff have tested positive in the past three school days across the District

District Health

In days since opening school on August 10, SCSD has experienced very little COVID-19 among faculty, staff, or students

The Suwannee County Health Department has been very "surgical" in their approach to quarantining of individuals

Statistics Can Be Stubborn: Peel Back the Onion

Suwannee County Resident Cases Since March 2020: **2,484**

Total cases among those two groups:	**1,163 (47%)**	**(10%)**
Suwannee County Resident Cases:	**1,321 (53%)**	**(90%)**

Take Away! Our resident cases outside of residential facilities is far lower than that of the State. We have accomplished this with very few mandates in place!

Even More Eye-Opening Statistics!

Of the 2,484 cases, there has been:
- 63 deaths (3% of all cases);
- 97% have survived!
- Statewide 98% have survived!

Even More Eye-Opening Statistics!

Of the 2,484 cases, there has been:
- 63 deaths (3% of all cases);
- 97% have survived!
- 98% Statewide have survived!

- **59** of the 63 deaths occurred in individuals with severe underlying health conditions; many of those in long-term healthcare facilities

Even More Eye-Opening Statistics!

Of the 2,484 cases, there has been:
- 63 Deaths (3% of all cases) 97% have survived!

- **59** of the 63 deaths occurred in individuals with severe underlying health conditions; many of those in long-term healthcare facilities
- **4** of the 63 deaths occurred in individuals with no known severe underlying health conditions

Even More Eye-Opening Statistics!

Of the 2,484 cases, there has been:
- 63 deaths (3% of all cases) 97% have survived!

- **59** of the 63 deaths occurred in individuals with severe underlying health conditions; many of those in long-term healthcare facilities
- **4** of the 63 deaths occurred in individuals with no known serve underlying conditions

ALL 4 were ages **65** and **OVER!**

Even More Eye-Opening Statistics!

Of the 2,484 cases, there has been:

◦ 63 deaths (3% of all cases) 97% have survived!

◦ **59** of the 63 deaths occurred in individuals with severe underlying health conditions; many of those in long-term healthcare facilities

◦ **4** of the 63 deaths occurred in individuals with no known serve underlying conditions

ALL 4 ages **65** and **OVER!** <u>**55** of the 63 deaths are in people ages 65 and OVER.</u>

Take Away! COVID-19 deaths are non-existent in our 2,484 cases in individuals under age 65, with no severe underlying health conditions.

Comparing the Flu to COVID-19

People at High-Risk for Severe Illness

Similarities:

Both COVID-19 and flu illness can result in severe illness and complications. Those at highest risk include:

-Older adults

-People with certain underlying medical conditions

-Pregnant people

Comparing the Flu to COVID-19

People at High-Risk for Severe Illness

Similarities:

Both COVID-19 and flu illness can result in severe illness and complications. Those at highest risk include:

-Older adults

-People with certain underlying medical conditions

-Pregnant people

Differences:

The risk of complications for healthy children is higher for flu compared to COVID-19.

However, infants and children with underlying medical conditions are at increased risk for both flu and COVID-19.

Take Aways!

- ✓ We are 4 weeks into the school year with students, and 5 weeks for faculty and most staff. We need to stay the course with our current plan. Our folks are doing a great job!

Take Aways!

✓We are 4 weeks into the school year with students, and 5 weeks for faculty and most staff. We need to stay the course with our current plan. Our folks are doing a great job!

✓The risks are extremely low for ALL people that do not have severe underlying health conditions.

Take Aways!

✓We are 4 weeks into the school year with students, and 5 weeks for faculty and most staff. We need to stay the course with our current plan. Our folks are doing a great job!

✓The risks are extremely low for ALL people that do not have severe underlying health conditions.

✓There is NO NEED FOR ALL OF THE PANIC! The media is doing a great job of that for us!
