

Advanced Placement Chemistry 2018-2019 Summer Assignment

This assignment will count as **5% of your grade** for first semester and should be **turned in on 8/17/18**. Students *may* get help from other students on the assignment, but all students must turn in their own work which has been completed **on their own**.

There are **two** parts to this assignment:

- Stoichiometry **problems** (to make sure you're ready to start in the fall)
- **Memorize** polyatomic ions and strong acids and bases (because you have to know them for AP and we'll need them memorized pretty early on in the year. You'll have a quiz the first week over the polyatomics listed and the acids and bases. You need to know the name, formula and charge for each.)

Stoichiometry Problems

Complete all problems on separate paper and circle your answer with correct units. Include all balanced equations.

1. How many grams of oxygen are required to react completely with 48.6 g of butane (C₂H₆)?
2. How many moles of oxygen are necessary to react completely with four kg of propane (C₃H₈)?
3. If 100. g of zinc metal and 100. g of copper (II) nitrate react, how many grams of copper metal will be produced according to the following equation?

4. In an experiment, 10 moles of magnesium reacted with excess hydrochloric acid forming magnesium chloride. How many moles of magnesium chloride were formed?
5. Ammonium nitrate, an important fertilizer, produces nitrogen gas, oxygen gas and water when it decomposes. Determine the mass of water produced from the decomposition of 25.0 g of solid ammonium nitrate.
6. How many grams of water will be produced if 2.35 moles of oxygen reacts with benzene (C₆H₆)?
7. When octane (C₈H₁₈) is burned in oxygen, carbon dioxide and water are produced. If 320 g of octane is burned and the 37 grams of water are produced, what is the percent yield?
8. How many grams of ethylene oxide, C₂H₄O, will be produced from 500. g of potassium hydroxide reacting with 1000. g of ethylene chlorohydrin, C₂H₅ClO, as shown in the equation?

9. How many grams of barium chloride are required to react completely with 0.101 g of sodium sulfate?
10. How many moles of hydrogen are produced from the reaction of three grams of zinc with an excess of hydrochloric acid?

Advanced Placement Chemistry 2017-2018 Summer Assignment

11. A piece of copper with a mass of 5.00 g is placed in a solution of silver nitrate containing excess AgNO_3 . The silver metal produced has a mass of 18.2 g. What is the percent yield for this reaction?
12. How many moles of ammonia will form from 5 moles of hydrogen? ($3\text{H}_2 + \text{N}_2 \rightarrow 2\text{NH}_3$)
13. Ammonia reacts with nitrogen monoxide to produce nitrogen gas and water vapor. If 0.240 moles of ammonia react, how many grams of nitrogen monoxide will be consumed?
14. 100. g of Ca(OH)_2 are added to a beaker containing 50.0g of HCl dissolved in water. How much calcium chloride will be produced?

15. Determine the percent yield for the reaction between 15.0 g N_2 and 15.0 g H_2 if 10.5 g NH_3 is produced.
16. Determine the percent yield for the reaction between 2.80 g of $\text{Al(NO}_3)_3$ and excess NaOH if 0.966 g Al(OH)_3 is recovered.

Advanced Placement Chemistry 2017-2018 Summer Assignment

Polyatomic Ions to be Memorized

Quiz the first week of school. Be prepared. (Look for patterns to help you memorize them)

<u>FORMULA</u>	<u>NAME</u>
PO_4^{3-}	phosphate
PO_3^{3-}	phosphite
HPO_4^{2-}	hydrogen phosphate
H_2PO_4^-	dihydrogen phosphate
SO_4^{2-}	sulfate
SO_3^{2-}	sulfite
$\text{S}_2\text{O}_3^{2-}$	thiosulfate
$\text{S}_2\text{O}_8^{2-}$	persulfate
HSO_4^-	bisulfate (or hydrogen sulfate)
HSO_3^-	bisulfite (or hydrogen sulfite)
CrO_4^{2-}	chromate
$\text{Cr}_2\text{O}_7^{2-}$	dichromate
MnO_4^-	permanganate
Hg_2^{2+}	mercury(I) or mercurous
NO_3^-	nitrate
NO_2^-	nitrite
N_3^-	azide
BO_3^{3-}	borate
ClO_4^-	perchlorate
ClO_3^-	chlorate
ClO_2^-	chlorite
ClO^-	hypochlorite
CN^-	cyanide
CNO^-	cyanate
CNS^-	thiocyanate
CO_3^{2-}	carbonate
HCO_3^-	bicarbonate (hydrogen carbonate)
$\text{C}_2\text{H}_3\text{O}_2^-$ (CH_3COO^-)	acetate
$\text{C}_2\text{O}_4^{2-}$	oxalate
NH_4^+	ammonium
H_3O^+	hydronium

Advanced Placement Chemistry 2017-2018 Summer Assignment

Strong Acids

Name	Formula
Nitric Acid	HNO ₃
Sulfuric Acid	H ₂ SO ₄
Perchloric Acid	HClO ₄
Chloric Acid	HClO ₃
Hydrochloric Acid	HCl
Hydrobromic Acid	HBr
Hydroiodic Acid	HI

Strong Bases

(Hydroxides of Group IA elements + 2 more)

Name	Formula
Lithium Hydroxide	LiOH
Sodium Hydroxide	NaOH
Potassium Hydroxide	KOH
Rubidium Hydroxide	RbOH
Cesium Hydroxide	CsOH
Strontium Hydroxide	Sr(OH) ₂
Barium Hydroxide	Ba(OH) ₂

Below is a list of some other topics I expect you to have a good understanding of. We will either barely touch on these topics or work through them at a pace that a good base understanding is necessary. Please ask me for some problems or look up some tutorials online to get prepared for the fall if you need to.

- Manipulating algebraic equations to solve for a variable of interest
 - Such as: $\frac{A}{B} = \frac{C}{D \times E}$ solve for D
- Nomenclature
- Balancing chemical equations
- Forming ionic compounds from a pair of ions
 - Such as magnesium chloride is MgCl₂
- Periodic Trends
- Calculating concentrations and making solutions and dilutions
- Gas Laws and calculations

Please e-mail over the summer if you are having trouble or need clarification. To ensure that I can receive your e-mail, please use this address: Jenny_Beck@gwinnett.k12.ga.us
